DOI: 10.1016/j.jtcvs.2010.05.016.x

<b>MV malformations</b>	<b>No. of patients</b>
MV regurgitation (or prevalent)	48
Type I (normal leaflet motion)	32
Annular dilatation	12
Cleft anterior leaflet	18
Leaflet defect	2
Type II (leaflet prolapse)	9
Elongated chordae	9
Type III (restricted leaflet motion)	7
Type A (normal papillary muscles)	
Papillary muscles commissure fusion	1
Short chordae	2
Type B (abnormal papillary muscles)	
Parachute MV	2
Hammock MV	2
MV stenosis (or prevalent)	45
Type A (normal papillary muscles)	24
Papillary muscle commissure fusion	14
Supravalvular membrane	7
Double-orifice MV	3
Type B (abnormal papillary muscles)	21
Parachute MV	10
Hammock MV	4
Shone complex	5
Arcade MV	2
<b>Total</b>	<b>93</b>

CMV, Congenital mitral valve; MV, mitral valve.

<b>Technique</b>	<b>No. of patients</b>
Papillary muscle splitting	35
Cleft closure	21
Annuloplasty (Kaye, Paneth)	20
Supravalvular ring excision	16
Commissurotomy	15
Chordal shortening	9
Ring annuloplasty	6
Commissuroplasty	4
Accessory orifice closure	2

## Table 2

<b>Cardiac anomaly</b>	<b>No. of patients</b>	<b>Patients with previous surgical intervention</b>
Subaortic stenosis	31	7
VSD	23	0
Aortic coarctation	19	19
Aortic regurgitation	4	0
Pulmonary stenosis	3	2
Abnormal LAD origin	2	0
Other	11	2*

MV, Mitral valve; VSD, ventricular septal defect; LAD, left anterior descending. \*Two patients had patent ductus arteriosus closure at birth.

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**

Stellin, Giovanni; Padalino, Massimo; MD, PhD; Vida, Vladimiro; MD, PhD; Boccuzzo, Giovanna; Orru, Emanuele; Biffanti, Roberta; Milanese, Ornella; Mazzucco, Alessandro

Journal of Thoracic & Cardiovascular Surgery.  
140(6):1238-1244, December 2010.  
DOI: 10.1016/j.jtcvs.2010.05.016.x

Table 2 List of patients with associated cardiac anomalies in the complex group and those in whom repair of cardiac anomaly was performed before MV repair

# Table 3

Technique	No. of patients
Papillary muscle splitting	35
Cleft closure	21
Annuloplasty (Kaye, Paneth)	20
Supravalvular ring excision	16
Commissurotomy	15
Chordal shortening	9
Ring annuloplasty	6
Commissuroplasty	4
Accessory orifice closure	2

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**

Stellin, Giovanni; Padalino, Massimo; MD, PhD; Vida, Vladimiro; MD, PhD; Boccuzzo, Giovanna; Orru, Emanuele; Biffanti, Roberta; Milanese, Ornella; Mazzucco, Alessandro

Journal of Thoracic & Cardiovascular Surgery.  
140(6):1238-1244, December 2010.  
DOI: 10.1016/j.jtcvs.2010.05.016.x

Table 3 Surgical techniques used to achieve mitral valve repair

# Table 4

Complications	No. of patients	Exitus
LCO syndrome	4	4
Bleeding	4	2
Complete AV block	2	0
Pericardial effusion	1	0
Pleural effusion	1	0
Mediastinitis/septic shock	1	1
Postpericardiotomy syndrome	1	0

*LCO*, Low cardiac output; *AV*, atrioventricular.

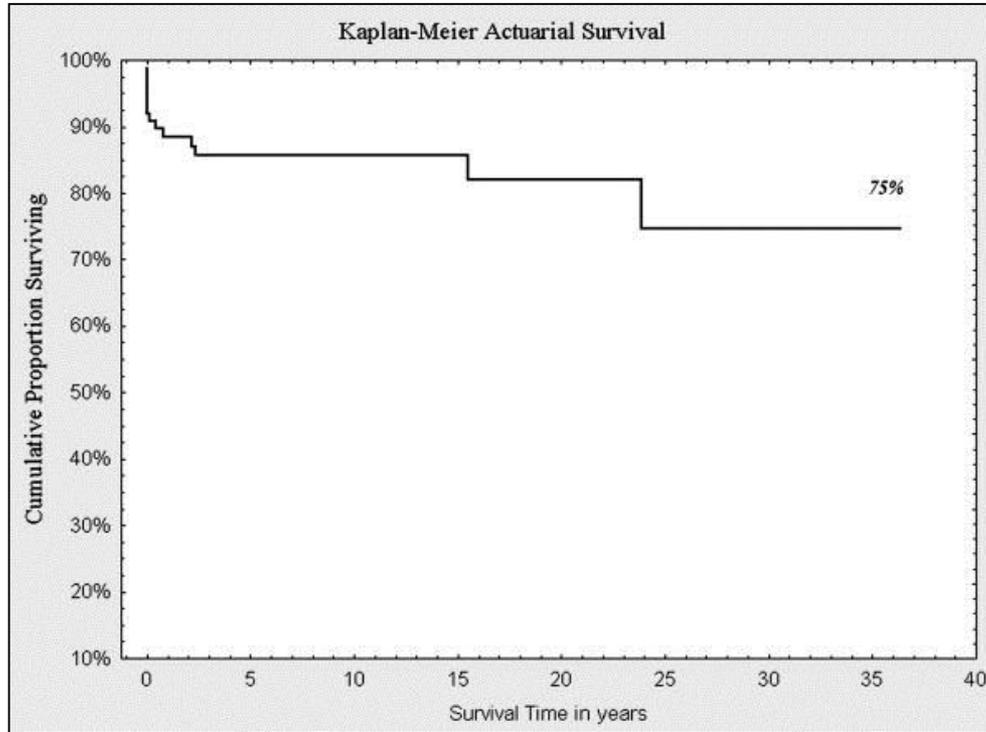

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**

Table 4 List of patients with early postoperative complications that led to early death

# Figure 1

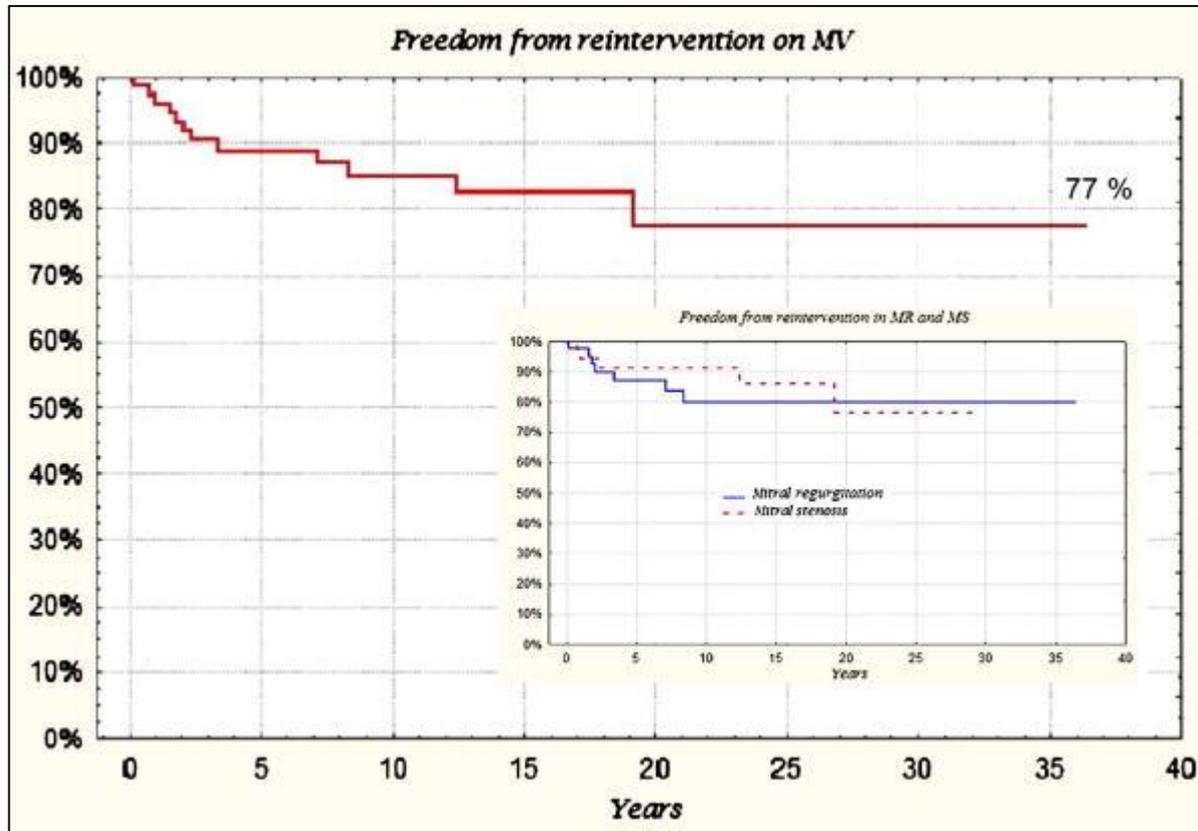

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**

Stellin, Giovanni; Padalino, Massimo; MD, PhD; Vida, Vladimiro; MD, PhD; Boccuzzo, Giovanna; Orru, Emanuele; Biffanti, Roberta; Milanesi, Ornella; Mazzucco, Alessandro

Journal of Thoracic & Cardiovascular Surgery.  
140(6):1238-1244, December 2010.  
DOI: 10.1016/j.jtcvs.2010.05.016.x

Figure 1 Kaplan-Meier analysis shows that overall survival is 75% at 36 years.

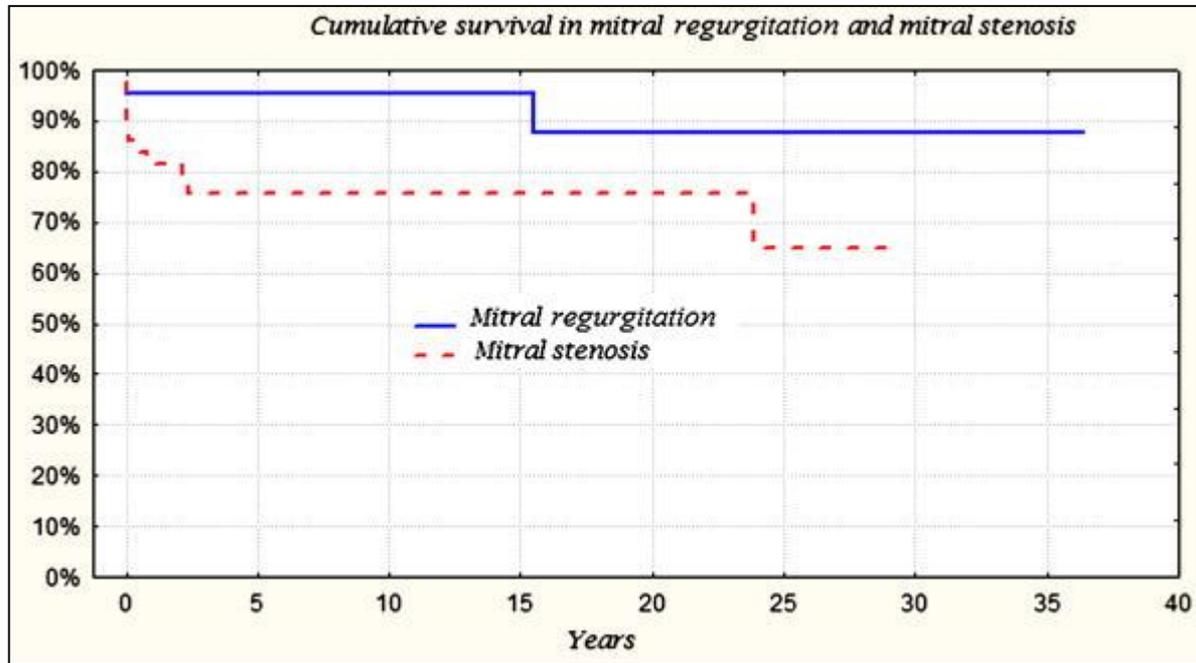

# Figure 2

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**  
Stellin, Giovanni; Padalino, Massimo; MD, PhD; Vida, Vladimiro; MD, PhD; Boccuzzo, Giovanna; Orru, Emanuele; Biffanti, Roberta; Milanese, Ornella; Mazzucco, Alessandro  
  
Journal of Thoracic & Cardiovascular Surgery.  
140(6):1238-1244, December 2010.  
DOI: 10.1016/j.jtcvs.2010.05.016.x

Figure 2 Kaplan-Meier analysis shows that freedom from reoperation on the mitral valve is 77% at 36 years.

# Figure 3

**Surgical repair of congenital mitral valve malformations in infancy and childhood: A single-center 36-year experience.**

Stellin, Giovanni; Padalino, Massimo; MD, PhD; Vida, Vladimiro; MD, PhD; Boccuzzo, Giovanna; Orru, Emanuele; Biffanti, Roberta; Milanesi, Ornella; Mazzucco, Alessandro

Journal of Thoracic & Cardiovascular Surgery.  
140(6):1238-1244, December 2010.  
DOI: 10.1016/j.jtcvs.2010.05.016.x

Figure 3 Kaplan-Meier analysis shows that survival estimates for patients with mitral stenosis are significantly lower than for patients with mitral regurgitation (P = .021; OR, 4.698).

Outcomes	Variables				
	Complex MV (OR)	MV stenosis (OR)	Parachute MV (OR)	Before 1984 (OR)	Age, y (OR)
Any adverse outcome	3.173	<i>2.520</i>	-	-	-
Early death	-	-	<i>7.122</i>	18.40	0.636
Late death	-	<i>6.973</i>	-	-	-
Preoperative medical therapy	-	-	<i>4.889</i>	-	-
Reoperation on MV	-	-	<i>6.817</i>	-	-
Operation on MV before 1 y of age	-	7.219	-	-	-
Heart failure at follow-up	-	-	<i>6.100</i>	-	-
Arrhythmias	-	-	<i>6.377</i>	4.744	-

Variables significant at a level of .05 < P < .1 are shown in *italics*. MV, Mitral valve; OR, odd ratio.
